# PEST CONTROL

Successful pest control doesn't just start with science – it continues day in and day out to help ensure your property is protected from pests and the damage they can do. Every Guardian Pest Control Specialist is trained to assess your building's unique characteristics, then implement and monitor an Integrated Pest Management plan based in science… created just for you.

What is Integrated Pest Management? Integrated Pest Management (IPM) is an effective and environmentally sensitive approach to pest control that relies on a combination of common-sense practices. IPM programs use current, comprehensive information on the life cycles of pests and their interaction with the environment. This information, in conjunction with available pest control methods, is used to manage pest damage by the most economical means, and with the least possible hazard to people, property, and the environment. What type of pests do we help with?

- Bed bug detection and elimination
- Bird control and management
- Chute Management
- Crawling Insects (roaches, ants, termites, spiders, etc.)
- Fly management and drain cleaning
- Flying Insects (flies, bees, wasps, etc.)
- Mice
- Rats

When you choose Guardian's Integrated Pest Management Plan, you choose a program backed by scientific research and proven results.

Servicing The Northeast & New England.
